

MANVERT FRUITSETTER

TECHNICAL DATA

DESCRIPTION:

MANVERT FRUITSETTER is a liquid NP fertilizer enriched with molybdenum.

COMPOSITION:

	%w/v
Total nitrogen (N) water soluble	7,4
Nitric nitrogen (N) water soluble	1,3
Ammonium nitrogen (N)	6,1
Phosphoric anhydride (P ₂ O ₅) water soluble	14,8
Molybdenum (Mo) water soluble	3,7

This product is chlorine free.

APPLICATION:

MANVERT FRUITSETTER is suitable to prevent and correct molybdenum deficiencies in all kind of crops. Its molybdenum content ensures the optimum nitrate metabolism, ensures proper vegetative growth in the most demanding periods such as flowering, vegetative growth and fruit fattening. It also promotes the synthesis of proteins and enzymes essentials for the plant. Enhances the pollen production, flower opening which promotes fruit set, giving more viability to the germination of pollen grains.

Its high phosphorus content promotes the root growth, micro elements absorption and all processes directly related to flowering and fruit set.

MANVERT FRUITSETTER can be applied by foliar spray and through the soil, through different irrigation systems (dripping, sprinkler, central pivot, micro jet...).

MANVERT FRUITSETTER can be applied all year long, but is recommended to use it in spring when the vegetative stage starts and when the crop is actively growing.

INSTRUCTIONS AND DOSAGE:

- Foliar application: 100-200 cc/hl
- Soil application: 1-2 l/ha

COMPATIBILITY:

MANVERT FRUITSETTER can be applied on all kinds of crops.

MANVERT FRUITSETTER can be mixed with the majority of the pesticides of common use, except those containing mineral oils or copper. The mixture should be prepared according to the following:

WATER – 2nd **MANVERT FRUITSETTER** – 3rd PESTICIDES

Do not mix with mineral fertilizers with pH lower to 4.
